SUMMARY

Software Engineer with 3+ years building Java, Spring Boot microservices, RESTful APIs, and React applications using Docker, Kubernetes, Kafka, and AWS, with experience in Spring AI, RAG, and vector databases.

PROFESSIONAL EXPERIENCE

Arizona State University Unions Facilities (Memorial Union)

Software Engineer

Tempe, USA

August 2024 – May 2026

- Contributed to building a Spring Boot inventory application from the ground up, developing barcode-based equipment tracking with a React client for faster check-in/check-out of tables, chairs, AV equipment, laptops, and other event assets; improved barcode transaction processing speed by 40% across a 254,000 sq. ft. facility managing 10,000+ events annually.
- Integrated booking and reservation data through REST APIs to automatically generate 2D and 3D room setup diagrams based on client requirements, while providing audit logs and equipment usage reports to support event planning and downstream teams.

Guru Construction

Software Engineer

India

January 2024 – July 2024

- Built and deployed a mobile-accessible workflow automation Java Spring Boot and PostgreSQL application replacing paper-based logging for 5 supervisors across 4 construction sites, processing 76 daily entries for attendance, wages, and vendor payments and cutting payroll preparation for 102 workers from 9 hours to 20 minutes.

Cognizant Technology Solutions

Software Engineer

India

September 2021 – January 2024

- Engineered full-stack Java, Spring Boot, and React modules across 5 e-commerce applications for Boots UK and a global tyre distributor, integrating Stripe payment gateways and the Boots Advantage Card loyalty system to raise transaction throughput by 35% for 10K+ daily active users.
- Re-architected a monolithic billing service into 12 containerized Spring Boot microservices on Docker and Kubernetes with asynchronous event-driven messaging over Apache Kafka, cutting p95 checkout latency by 40% from 850 ms to 510 ms.
- Optimized 30+ RESTful and GraphQL endpoints for product catalog and fitment search, accelerating client data retrieval by 30% across 50+ integrations through Spring Data JPA tuning, Oracle SQL query optimization, and Redis caching.
- Hardened checkout authentication flows with Spring Security, OAuth 2.0, JWT session rotation, and API gateway throttling, closing 100% of unauthenticated access findings across two consecutive security audits.
- Automated CI/CD delivery through Jenkins pipelines, Docker image builds, and Kubernetes blue-green rollouts, halving release cycles from 4 hours to 2 hours across 6 services while driving code reviews and unit testing in an Agile Scrum team.

EDUCATION

Arizona State University

Master's in Data Science, Analytics and Engineering GPA: 3.90 / 4.00

Tempe, USA

August 2024 – May 2026

RV College of Engineering

Bachelor's in Engineering GPA: 3.51 / 4.00

Bangalore, India

August 2017 – May 2021

TECHNICAL SKILLS

Programming Languages: Java, Python, SQL, JavaScript, HTML, CSS

Frameworks and Libraries: Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Spring Batch, Spring AI, Hibernate, React, REST APIs, GraphQL

Databases and Caching: PostgreSQL, Oracle, SQL Server, MySQL, Redis, OpenSearch, pgvector

Cloud and DevOps: AWS, Docker, Kubernetes, Jenkins, GitLab, CI/CD, Apache Kafka, Git, Gradle

Testing and Practices: JUnit, Mockito, Integration and Load Testing, Microservices, Event-Driven Architecture, RESTful API Design, Multi-Tenancy, OAuth 2.0, JWT, RAG, Agile, Scrum, Code Reviews

PROJECTS

CliniShield Caregiver Medication Platform | Java 21, Spring Boot, PostgreSQL, pgvector, Kafka, Spring AI, AWS

- Built a drug interaction knowledge base from FDA labels and 12M FAERS reports using partitioned Spring Batch jobs, achieving 0.87 extraction precision against an expert-curated benchmark; developed four Spring Boot microservices with three-layer tenant isolation and a citation-enforced RAG assistant gated in CI by a 40-case evaluation harness.

Verdant Live Plant Marketplace | Java 21, Spring Boot, PostgreSQL, Kafka, Redis, OpenSearch, React, AWS

- Architected a multi-nursery marketplace with order saga orchestration, transit-time-optimized allocation, and outbox-based event delivery, achieving 180 ms p99 latency at 10x festival traffic; implemented a double-entry settlement ledger with derived balances and snapshot queries verified through jqwik property testing against full journal replay.

CERTIFICATIONS

- Oracle Cloud Infrastructure 2025 Developer Professional
- AWS Certified Cloud Practitioner
